

# CAREER DEVELOPMENT

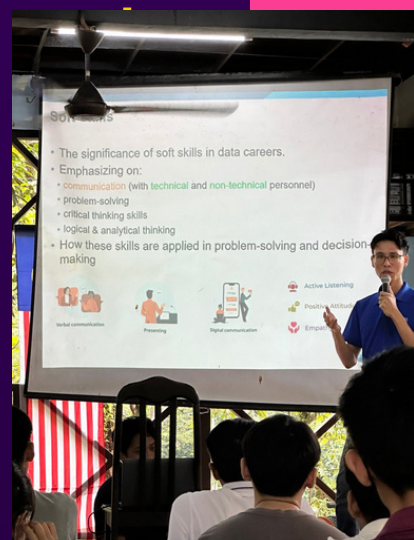

BY DHESHIEGHAN A/L SARAVANA MOORTHY  
A23CS0072

## Introduction

There were two career talks organised by DR ARYATI where on 23rd October we attended career talk by MR Habib and another one on 28th of October by PPG

## Soft Skills

In data career soft skills such as communications, problem-solving, critical thinking skills, logical & analytical thinking skills are very important. These skills can be applied in problem-solving and decision-making when we are having verbal communication with clients or colleagues, presentation in front of clients or audience and also digital communication various company clients.

## Qualified Skills

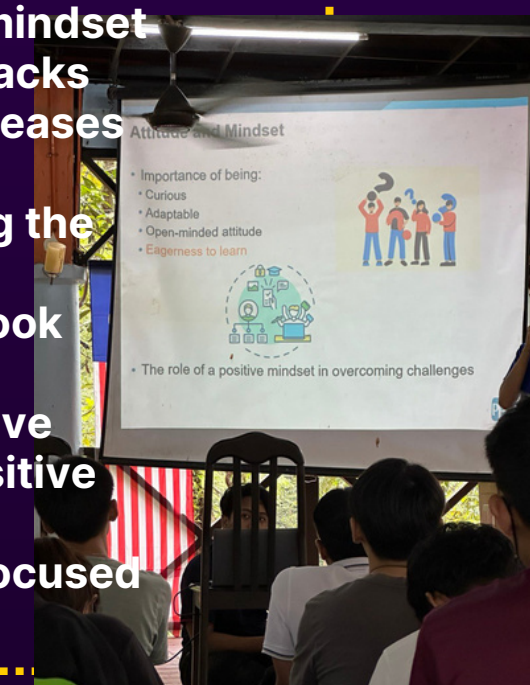

According to PPG, we should acquire qualified skills such as SQL skills, data modelling, visualization skills using BI tools and programming tools. These skills are highly sought after in today's data driven world in various industries, including data analytics, business intelligence, data engineering and data science. This skills allows professional to work with data efficiently, derive useful insights and drive informed decision making.

## ATTITUDE & MINDSET

Firstly, we should always be curious which fuels our desire to explore, ask questions and seek new knowledge. It is also the foundation of for learning and personal growth. Secondly, being adaptable also a great mindset which allows an individua to navigate and thrive in various environments . Thirdly, being an open minded person encourages a willingness to consider different perspectives and ideas. It also helps in building stronger relationships and making informed decisions. Lastly, we should always have the eagerness to learn which keeps an individual engaged and motivated.

A positive mindset always plays an important role in overcoming challenges. Positive mindset helps individuals bounce back from setbacks and adversity. Nextly, being positive increases an individuals problem-solving skills by promoting creative thinking and reducing the impact of anxiety on decision making. Furthermore, maintaining a positive outlook contributes to better mental health and emotional health by reducing the negative effects of stress and anxiety. Lastly a positive mindset always boost motivation and determination, helping individuals stay focused on their goals.

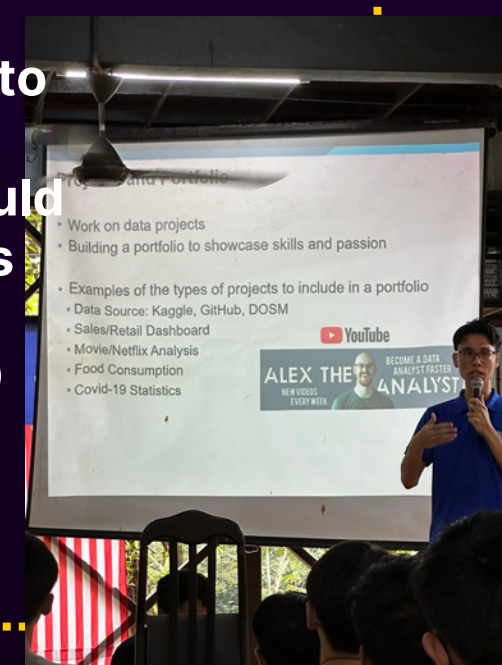

## Mistakes in Job Hunting

According to Mr Habib, there are a lot of mistakes made by students during job hunting . Firstly, one of the very common mistakes made by fresh graduates are constraining themselves to certain jobs only. Every one of us should be open to any job opportunities offered that fits our qualification and interests. Furthermore, graduates should start applying for jobs while they are pursuing their degree in their certified field to make sure they have a job when they graduate

## Project & Portfolio

Building a portfolio is very important to showcase our skills and passion towards our interested field. We should work on data related projects such as Movie/Netflix analysis, food consumption data, and also Covid-19 statistics. Projects and Portfolio enhances our chance to get hired by companies.

## Thoughts

After attending the two career talks organised by our beloved DR Aryati I've gained lot of knowledge about the upcoming future and of course about the industry. Mr Habib gave me a lot of insights about mistakes during job application and i learned about the things that i should not do when applying for a job meanwhile the people from PPG gave me alot insights about their company and how to grow as a data engineer in my career and also how data engineering can help companies to improve their profits and also decrease their losses. In conclusion, i'm thankful to both the PPG company and also Mr Habib for helping me as a student also a future data engineer.
